canon 814 xl-s manual pdf

Choose your shop Both models have the same basic functions, only the lens is a 8x zoom lens and the overlap function applied in the 1014XLS is not available in this model. Some say the 814 XLS has a sharper lens. If you have a tight budget, this is the camera you definitely want. Very well built, bright and big viewfinder, sleek and ergonomically designed. Rotation angle approx. 130 degrees. Manual cancellation is possible. Shutter blades are controlled by independent DC micromotors. Fading of both picture and sound, picture only or sound only is possible. Double recording system with pulse signal synchronization is possible using an external recorder. External power source can be used. Updated 25 March 2020 See also Canon Canon 1014 Canon 1014 xls Canon 1218 Canon 310 Canon 512 Canon 514 Canon 514xl s Canon 518 Canon 814 Canon 814 xls Canon zoom 250 Share them here. Here you'll find most of them for download, in English language as well as multilingual. The manuals for very few specific cameras were not available anymore, but the manuals from earlier, later or similar models can be used instead. Just very few minor details will differ e.g. smaller lens, missing or an additional feature etc. The operating instructions remain always the same. The lens was a new 8x zoom lens starting at the wide angle of 7 mm. It had telephoto macro with focusing by the focusing ring and wideangle macro with focusing by the zooming ring in the same way as the 1014XLS. This model did not have a superimposing display in the viewfinder, but rather had a warning display outside the image area. The overlap function applied in the 1014XLS, was not employed for this model. Spectra coating. Closeup shooting distance and the field of view when the focusing ring is set at infinity Rotation angle Approx. 130 degrees. Manual cancellation of the CCA filter is possible with the CCA filter switch. Shutter blades are controlled by independent DC micromotors. <http://feyzullahalpman.com/userfiles/craftsman-model-88779-manual.xml>

All files below were scanned from original manuals, Includes 3page addendum also. Last page would make a nice poster. thanks to J.L. Seguin for the donation!. Last two pages could be posters. thanks to J.L. Seguin for the donation! Shows how to wire cable to connect EBM to Nagra, Stellavox, Uher and Perfectone. Good exploded views of camera components, wiring diagrams. Also has some pages for the SB, SBM, M and RX4 models. Finally, get all the facts straight on this. Press release. Great examples of 1940s graphic design. Skiing! Aerial Shots sort of. Worth it just for the racy ad on the back cover!. Full parts lists, lots of exploded views of camera components and mechanisms. Accompanies the Repair Manual, includes instructions on how to adjust components. Super8 and 35mm products. From the 70s I think. The complete article is available on Google Books now, which is pretty amazing to me. Full color 1974 brochure with tech specs and feature list. The photos were taken by me, of the prototype unit I purchased from the creator. Saying no will not stop you from seeing Etsy ads, but it may make them less relevant or more repetitive. I believe that the lap dissolve button might be jamming because when I hold down the record button, press upwards the fade lever and press in the lap dissolve button there are lots of strange whirring noises, which i am not sure is normal. When i press the record lever again sometimes the lap dissolve button does not pop out makes additional strange whirring noises. It sounds as though the footage rewinds based on the noise but the film prongs dont move clockwise or anticlockwise for the rewinding. Is this meant to happen. It remains stationary so the film is forced into a slack loop inside the cartridge, then after the auto fade out to full black, the rewind process begins to pull the film back out of the take up side of the cartridge via pushing the film backwards into the supply side of the cartridge. Many of the Super 8mm Sound cameras could only do lap dissolves with Sound Film Cartridges, not Silent ones, However, the CANON 1014XLS will do lap dissolves with both film types. Also, the instruction manual doesnt state this, but its also quite possible that the functions will not operate normally unless a cartridge is in the film chamber. On many cameras, the cartridge depresses button or two in the chamber to let the camera know film is present. Another button lets the camera know a sound cartridge is present so that the capstan recording mechanism is activated. If you have an empty Super 8mm cartridge to use for testing, no actual film is affected, so that would let you play with the mechanism testing if the camera doesnt behave correctly without a cartridge present. Hope this helps. Paste as plain text instead Display as a link instead Clear editor Upload or insert images from URL. Its current name is Canon Inc. . January 26, 2003 Therefore Yoshida Goro disassembled an original Leica II and studied it mindfully.

In June 1934 they released their first camera, the Kwanon pronounced kannon , named after the Buddhist bodhisattva of mercy of the same name , ; in Chinese Guan Yin. The following year the cameras name was changed to the less overtly religious Canon , pronounced kyanon . The company changed its name to Canon Camera in 1947, and to Canon in 1969. Other innovations followed. These lenses remain popular even now by users of rangefinder cameras from Canon, Leitz, and so forth. The Serenar 50mm f1.8 of 1951 was an early highlight of that brand. Next big steps in the SLR field were the Canon F1 of 1971, the Canon EF with automatic exposure based on the shutter priority principle, and the first computerized SLR Canon AE1 of 1976. In 1986 Canon was the second after Sony introducing a completely electronic still camera without film, the Canon RC701, which was based on video technology and also the first of these cameras with interchangeable lenses. In 2000 it launched its first amateur DSLR Canon EOS D30. Canons APS SLRs as well as its DSLRs continued to have the Canon EF mount so that older Canon autofocus lenses are applicable with the newer cameras. Canon started to make its own CMOS image sensors. The distance from flange to film is also quite small, which makes it one of the most adaptable though AF functions do not work, many users have adapted their EOS bodies to use lenses from Nikon, Contax, Leica, Pentax, and others. Sexiness and coolness factor aside, the versatile 814XLS is as close to perfection as a Super 8 camera can get. Why do I prefer the lesser 814XLS over the more expensive 1014XLS Sharper lens and better ergonomics. The Canon Zoom 756mm f1.4 Macro on the 814XLS is sharper and lighter. The Canon zoom 6.5 65 mm f1.4 macro on the 1014XLS is wider, longer and heavier. Making the 1014XLS nose heavy and unwieldy in your hands. Both models were designed and engineered in the early 80's and as such they are as advanced and reliable as modern Super 8 movie cameras can get. If Canon were to design a top of the line Super 8 camera today I doubt they could improve on the design and performance of the 814XLS, except for maybe getting rid of the allelectronic exposure system and adding a true mechanical iris. As much as I love the superior imagery my Zeiss GS8, Nikon R10, and Beaulieu ZM2 produce, I lately find myself shooting more and more with my versatile 814XLS. The big and bright viewfinder makes it very easy to frame and focus. I love the sleek and ergonomic design of the body and the handle.

The body is decently thick metal and the internals contain a chip that controls the framerates, making them very accurate. I used this camera recently while I was at an aquarium and still managed to get sharp, wellexposed images even with the low natural lighting. I prefer the eyepiece of the 814E. Many hold this camera in high regard as a high point in super 8 technology 2nd only to its big brother the Canon 1014XLS. The camera is missing the wired remote and the rubber hood ring. The locking mechanism for the handle is sticky but could easily be fixed by someone with a little know how. Attached here is the PDF of the Camera Manual for the Canon 814XLS and 1014XLS Super 8MM cameras. The Canon Super 8MM Cameras are some of the most advanced. I like the fact the the 1014 E has the capability of going to 54fps, but the XLS just overall looks like a nicer camera. The whole sound recording aspect isnt very useful to me as those cartridges are no longer made, but the XLS can be converted by Pro8 to Max 8, and have a crystal sync installed for sync.
